Fully illustrated, easy to follow
Instruction Manual
Included

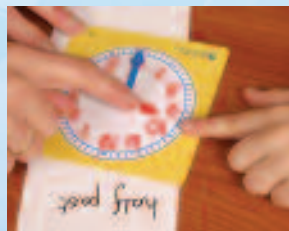

The Number Box is a completely new Numeracy resource for Teachers and Teaching Assistants to use either with individual children to establish basic concepts of numeracy or to support groups of children who are not yet working with abstract concepts. It is suitable for employment as a Wave 3 resource

The Number Box works in much the same way as the Five Minute Box by providing TAs with a system to use with individuals for 1:1 teaching on a regular basis in order to establish the basic concepts of number. It uses multi-sensory methods throughout and comes complete with resources, record of achievement booklets and fully illustrated, easy to follow instructions. **The Number Box** has been designed to provide a progression of skills and a full record of work, showing successes and areas of difficulty.

The system works in very small steps from the recognition of numbers through to knowledge of number concepts up to tens and units. It also includes resources for teaching and consolidating concepts of time, money, shape and measurement. The system has been based upon the principles laid out in The National Numeracy Strategy and can be used from P levels up to level 2B.

In addition to its usefulness as a 1:1 resource, it is also intended to be used for in-class support for the small groups of children in year 2 onwards who are not yet able to work at an abstract level and require the continued support of practical resources in order to understand the class lessons.

As with the Five Minute Box, it is paper free, using instead a whiteboard and wipeable work boards. There is no need for teacher planning as the system is self-perpetuating following the targets set out on the record of works books. **The Number Box** contains sufficient material to work with 1 or 2 children at a time, or for support and demonstration to a small group. Additional packs can easily be purchased to allow it to be used with small groups.
